COIN ROLL CRIMPING SYSTEM CM-65

It's As Simple As 1, 2, 3!

1. Open the storage compartment, select the Crimp Head desired, and insert it into the Crimping System. Turn the power switch on.

2. Hold the roll of coins against the rotating head and in a few seconds, you will have a professionally sealed coin wrapper.

3. The sealed coin wrapper.

High Speed Crimping System

The Semacon CM-65 Coin Roll Crimping System is designed to apply a professional closing seal to the open end of pre-crimped or flat style coin wrappers. It requires merely a few seconds to proficiently seal each coin wrapper. It is designed to work with a variety of wrapper styles in addition to the pre-crimped style, including inexpensive flat wrappers that need to be sealed on both ends.

Ease of Use

The CM-65 is very easy to use. Insert the proper Crimp Head into the Crimping System, turn on the power and press the coin wrapper against the head. A few seconds later, you will have a professionally sealed coin wrapper.

The Crimping System will work with a variety of coin wrapper styles. However, best results will be obtained with shotgun shell style pre-crimped coin wrappers (always perform a sample test with other wrapper styles to confirm compatibility). Shotgun shell or pre-crimped style wrappers are the most efficient choice for the high speed wrapping of large volumes of coins.

Crimp Heads

Available in sizes for domestic and many foreign coins. The CM-65 can be ordered with your choice of Crimp Head sizes and in either 110VAC/60Hz or 220VAC/50Hz power options.
