US GREEN ECO STAT Biodegradable Tamper-Evident Currency and Coin Bags Protect Both Your Deposit and the Environment.

The disposable security currency and coin bags now in use pose serious challenges when put in the normal waste stream and end up in landfills. Their adhesive security closures and other contaminants have always severely limited legitimate recycling options. This situation begged for a solution that doesn't contribute to the mountain of waste. That solution has arrived with US Bank ECO STAT truly biodegradable deposit and shipping bags.

US Bank ECO STAT bags are engineered to provide the identical properties of conventional bags such as shelf life and security, yet when disposed of will be metabolized into inert biomass by organisms commonly found everywhere on the planet. This biodegradation process can take place aerobically and anaerobically in landfills - even without the presence of light.

US Bank ECO STAT bags are NOT photodegradable like other products, so shelf life and security are not impacted! The bioactive compounds added to the plastic resins combine with heat, moisture, and the microorganisms found in the soil, to metabolize the bags into an inert humus harmless to the environment.

US Green ECO STAT bags are available in a full range of sizes to meet every deposit and shipping need. They feature the same closure systems as our conventional products, including D-TEC, the new, wide-spectrum, enhanced visibility, tamper-evident closure system.

US Green ECO STAT currency and coin bags are your eco-friendly deposit and shipping bag solution.
