

GOLSTON CO. MODEL 47-12 PNEUMATIC CARRIER

The Model 47-12 is for use in 4" X 7" point-to-point pneumatic systems. This unique side-opening carrier is easily loaded with large or bulky items. It is available in black or 1/2 transparent and 1/2 black. The black impact-resistive body is an ideal replacement for aluminum or other heavy-load carriers.

The standard Model 47-12 is closed with a spring-loaded plastic catch, but is also available with a key lock with many possible key combinations. The key-locked version is desirable when limited access to the carrier is required. The carrier has gray felt

bumpers and can be color-coded with color strips.

A one piece 1/2" foam liner is now available for the Model 47-12. This versatile liner is designed to adjust to the contour of the carrier. It provides protection for items of all shapes and sizes.

The approximate dimensions at the largest points of the carrier are 3 3/4" H X 6 3/4" W X 14 1/4" L.

All replacement parts are available for immediate shipment and can be easily installed. Factory service is also available on all Golston Co. carriers.
